2(g)	**AO2 (3 marks)/AO3 (3 marks)/AO4 (3 marks)** **AO2 and AO3** • Healthcare provides medicines and medical treatments to increase the overall health of the nation • The external benefit of providing healthcare to an individual often exceeds the private benefit • Free access to healthcare means that illnesses can be treated quickly therefore improving life expectancy across all age groups in England • This can help to reduce inequality and poverty by enabling the population to work and gain income from being fit and healthy • Having a healthier workforce reduces the amount of sickness absence and potentially improves labour productivity • This could result in economic growth and therefore help to reduce poverty and inequality in England • Healthcare also provides many jobs for healthcare workers including nurses, doctors and by building new hospitals **AO4** • However, providing free healthcare cost the tax payer £134bn in 2020 • There is an opportunity cost of spending so much money on healthcare which could be spent on other poverty reduction methods • Having a healthcare system which is free means that there is often an excess demand for healthcare, leading to the NHS being constantly overstretched • This results in shortages of hospital beds and may not reduce poverty and inequality • There are other methods that might be more effective in reducing poverty and inequality, such as education or progressive taxation • There should be a combination of methods used to reduce poverty and inequality in England

Question Number	With reference to the data above and your knowledge of economics, assess the use of taxation to protect the environment in a country such as Germany. Indicative content
2(g)	**AO2 (3 marks)/AO3 (3 marks)/AO4 (3 marks)** **AO2 and AO3** • Taxation can be imposed on activities that damage the environment • Taxation is used to ensure consumers and producers pay the full social cost of producing a good or service • Increasing taxation from 7% to 19% would substantially increase the price of meat for consumers which may result in less demand for meat products • This would reduce the amount of greenhouse gas emissions caused by animals • Increased taxation could also raise additional revenue for the German Government • This could be used to finance other pollution reduction schemes or improve animal welfare • Taxation provides a market incentive for firms and consumers to switch to meat alternatives which may not cause as much environmental damage **AO4** • However, increasing taxes on meat may reduce incomes for farmers if demand falls for meat products • Increasing taxes on meat products may reduce the choice for consumers of what food they can afford, particularly low-income families • Demand for meat may be quite inelastic and an increase in tax may do little to reduce demand and therefore only marginally reduce the amount of pollution • There are other methods that might be more effective in protecting the environment, such as subsidies, fines or pollution permits • The German Government should use a combination of methods to protect the environment

Question Number	Assess the advantages of free trade to firms located within the EU. **Indicative content**	Mark
2(g)	**AO2 (3 marks)/AO3 (3 marks)/AO4 (3 marks)** **AO2 and AO3** • Free trade is a situation in which goods and services coming into or going out of a country/trade area are not controlled or taxed • The new free trade area consists of over 770 million people and trades over €88bn in goods and €34bn in services every year • Firms located within the EU would be able to access a much wider market for its goods and services thereby increasing sales • Mercosur is removing tariffs on 91% of EU goods on items such as clothing, wine, chemicals and canned peaches • This means that any EU firm operating in these areas will be able to export to the Mercosur area without additional tariffs and could increase revenues • Expansion into a new trading bloc could help to reduce risk for EU firms if demand falls within the EU **AO4** • However, free trade also means that EU firms will face greater competition from firms within the Mercosur area • EU firms may have increased competition from cheaper, low-cost firms within the Mercosur area that may have lower wage costs compared to EU firms • The EU has agreed to end 92% of tariffs on goods from the Mercosur area • This may have a negative impact on EU farmers particularly those involved in the production of beef, sugar and chicken • The overall impact will depend on the quality and price of the products made within the EU compared to the products made in the Mercosur area	**(9)**

Question Number	With reference to the data above and your knowledge of economics, assess the disadvantages of higher business tax rates on investment in a country such as the UK. **Indicative content**	Mark
2(g)	**AO2 (3 marks)/AO3 (3 marks)/AO4 (3 marks)** **AO2 and AO3** • Business tax is a direct tax on the profit of a firm • Business tax rates in the UK have increased from 19% to 25% in April 2023 • Increasing business tax rates by such a large percent (6%) may result in less tax revenue for the UK Government if firms do not locate in the UK or if UK firms relocate to the US • The US has a much lower tax rate of 21% in comparison to the UK which could be very attractive to MNCs • Firms such as Associated British Foods will have to pay £20m more in taxation • This could result in the firm having less to invest in the UK economy • This is likely to result in a negative impact on GDP and employment if many firms have less profit to invest and expand in the UK **AO4** • However, increases in business tax rates can help provide the UK Government with an additional £18bn in tax revenue • This could be used by the UK Government to invest into public services for the UK population which might offset any reductions in investment by the private sector • The UK's tax rate of 25% is comparable to China and France and is still significantly lower than Germany's 30% tax rate • This could mean that the impact of the higher rates of business tax is minimal • The level of investment is affected by a range of factors, such as business confidence and not just the rate of business taxes in a country	**(9)**

Question Number	With reference to the data above and your knowledge of economics, analyse how high levels of cost-push inflation affect business confidence in a country such as Türkiye. **Indicative content**	Mark
1(h)	**AO2 (3 marks)/AO3 (3 marks)** **AO2 and AO3** • Higher energy costs of 157.2% can raise production and transportation costs resulting in an increase in raw material prices and overall costs of production • Higher production costs can lead to lower profits for firms in Türkiye • This is because firms may not be able to pass on the full cost of inflation to consumers in the form of higher prices reducing business confidence • When costs rise faster than firms can adjust their prices, profit margins get squeezed reducing business confidence • Firms may struggle to plan for the future. This is because they are not sure what energy prices will be like in the future causing uncertainty • This uncertainty can erode business confidence as firms are unsure about the future success of their operations	**(6)**
