3(a)	**AO1 1 mark** **B** government revenue is greater than government expenditure	**(1)**

Question Number	**Answer**	Mark
3(b)	**AO1 1 mark** **A** appreciation	**(1)**

Question Number	**Answer**	Mark
3(c)	**AO2 3 marks** Award 1 mark for identifying a reason Award 1 mark for developing the reason Award 1 mark for the response being in context • One reason is for business/consumer confidence **(1).** If prices of goods and services are stable at 3% **(1)** this can help consumers/firms plan for their future spending **(1).** • One reason is to keep Cyprus internationally competitive **(1).** This may lead to higher export sales if competitors have higher than 3% inflation **(1),** thus reducing unemployment **(1).** Accept any other appropriate response.	**(3)**

Type MS · Exchange rates: meaning and what moves a currency

Answer 1 of 7 · Question 3 part d · 6 marks

2020 JAN · Paper 02 · extract 2 of 5 · find part d in this mark scheme extract

Question Number	Indicative content	
3(d)	**AO2 (3 marks)/AO3 (3 marks)** **AO2 and AO3** • Changes in the interest rates in South Africa will affect whether people will want to deposit money in South Africa • If South Africa has higher interest rates relative to other countries it will become more attractive to deposit money in South Africa • This is often referred to as hot money • Savers will get a better rate of return from saving in South African banks – now 6.75% • Therefore demand for the South African Rand will rise causing an appreciation of the currency

Interpretation of economic information will be excellent, with a thorough analysis of issues (AO3).

Type MS · Exchange rates: meaning and what moves a currency

Answer 1 of 7 · Question 3 part d · 6 marks

2020 JAN · Paper 02 · extract 3 of 5 · find part d in this mark scheme extract

Question Number	Indicative content
3(e)	**AO2 (3 marks)/AO3 (3 marks)/AO4 (3 marks)** **AO2 and AO3** • Business tax is a direct tax on the profit of a firm • Cuts in business taxes can help provide a firm with additional funds to expand its factors of production • Lower business taxes can also provide an incentive to firms to increase investment thereby increasing output • This is likely to result in increasing GDP and employment • The US has already lowered business taxes from 35% to 21% and has plans to reduce this further to 15% • This could result in firms setting up in the US rather than other countries such as Mexico who have a business tax of 30% thereby increasing productive capacity and total output from the increased investment **AO4** • However, MNCs might be attracted to countries in Figure 3 such as Canada and Ireland which have lower business taxes compared to the US • Lowering business taxes by such a large percent may result in less tax revenue for the US government rather than any increase in investment if firms do not locate in the US • Less government revenue may result in less government investment • There is no guarantee that firms will reinvest the additional capital into expansion and could just give the saving in taxes to shareholders in the form of dividends

3(b)	**AO1 1 mark** **C** depreciation	**(1)**

Question Number	**Answer**	Mark
3(c)	**AO2 3 marks** Award 1 mark for identifying an impact Award 1 mark for developing the impact Award 1 mark for the response being in context • One impact is a fall in demand for Egyptian exports **(1).** Inflation of 17.7% makes domestic goods more expensive **(1)** so other countries may not buy Egyptian goods resulting in a deficit on the current account **(1)**. • One impact is an increase in imported goods **(1).** Inflation of 17.7% makes imports appear cheaper than Egyptian goods and services **(1)** so consumers prefer to purchase imports therefore having a negative impact on the current account **(1)**. Accept any other appropriate response.	**(3)**

Type MS · Exchange rates: meaning and what moves a currency

Answer 2 of 7 · Question 3 part d · 6 marks

2020 JAN · Paper 02 (regional R) · extract 2 of 5 · find part d in this mark scheme extract

Question Number	Indicative content
3(d)	**AO2 (3 marks)/AO3 (3 marks)** **AO2 and AO3** • Currency speculators have an impact on the exchange rate of a country due to supply and demand factors • Speculators will buy more currency if they believe that the exchange rate of the US$ will rise in the future. • The increase in demand for the currency causes the value of the exchange rate to rise compared to other currencies. • Conversely, the value of the exchange rate may fall if speculators sell a currency if they believe that the exchange rate will fall. • This causes a fall in the value of the currency due to an increase in the supply available. • The impact of speculators is often that their actions bring about what they predict will happen.

2020 NOV · Paper 02 · extract 3 of 5 · find part d in this mark scheme extract

Question Number	Indicative content	Mark
2(g)	**AO2 (3 marks)/AO3 (3 marks)/AO4 (3 marks)** **AO2 and AO3** • Benefit payments are payments given to people to ensure they have a minimum standard of living • These include benefits such as unemployment benefit, state pension and in this case, child benefit • The advantages are that benefit payments help to reduce inequality and reduce relative poverty as the money is given directly to people on no or low-incomes • Benefit payments will give those on low income a better living standard and help contribute to a more cohesive society • Canada estimates that 300,000 children have been lifted out of poverty due to the child benefit payments • This could be due to more working mothers being able to return to work and therefore being able to contribute to society **AO4** • However, increasing welfare benefits creates a disincentive to work • Many families may face the poverty trap and are often better off on benefits than working • The cost of the benefits has to be borne by society so there is often an opportunity cost to a country from using benefit payment to redistribute income • Not all people are entitled to receive the child benefit which could result in resentment • There are other methods which might be more effective in redistributing income, such as progressive taxation or investment in education • The Canadian Government should use a combination of methods to reduce inequality and poverty	**(9)**

Answer 4 of 7 · Question 3 part b · 1 mark

2021 NOV · Paper 02 · extract 3 of 5 · find part b in this mark scheme extract

Question Number	**Indicative content**
3(e)	**AO2 (3 marks)/AO3 (3 marks)/AO4 (3 marks)** **AO2 and AO3** • GDP is the market value of all final goods and services produced in a year • GDP is used to measure economic growth all over the world • This means that comparisons can be easily made between the growth rates of Ghana and different countries over time • Ghana has double the GDP growth rate compared to other emerging economies • GDP is also used as an indicator of a nation's overall standard of living because, generally, a nation's standard of living increases as GDP increases • Ghana was predicted to have a 8.8% GDP growth rate in 2019 and this could indicate an increase in living standards for the population **AO4** • However, using GDP to measure growth does have some limitations • Increases in inflation could distort the true rate of economic growth in Ghana and only real GDP figures reflect the true rate of economic growth in an economy • GDP does not include figures for the hidden or informal economy which are not included in GDP figures • GDP does not take into account external costs such as environmental costs and as a result GDP does not measure how these impact on the wellbeing of society • Ghana is becoming heavily reliant on oil which can have many associated external environmental costs • GDP figures do not reflect how additional income is distributed between the population of Ghana and much of the growth may not be evenly distributed amongst the population of Ghana who still may remain in poverty

Answer 6 of 7 · Question 1 part d · 2 marks

2023 JUN · Paper 02 (regional R) · extract 4 of 5 · find part d in this mark scheme extract

Question Number	With reference to the data above and your knowledge of economics, analyse the limitations of using GDP as a measure of economic growth for a country such as Singapore. Indicative content	Mark
1(h)	**AO2 (3 marks)/AO3 (3 marks)** **AO2 and AO3** • GDP is the market value of all final goods and services produced in a year • Increases in inflation could distort the true rate of economic growth in Singapore and only real GDP figures reflect the true rate of economic growth in an economy • GDP does not include figures for the hidden or informal economy as they are not included in GDP figures • GDP does not take into account population changes in Singapore • GDP does not take into account external costs such as environmental costs • As a result GDP does not measure how environmental costs might impact on the wellbeing of society • GDP figures such as 7.2% do not reflect how additional income is distributed between the population of Singapore • The growth may not be evenly distributed amongst the population of Singapore who still may remain in relative poverty	**(6)**

Level	Mark	Descriptor
	0	No rewardable material.
Level 1	1–2	• Demonstrates basic knowledge and understanding by developing relevant points. Limited application of economic terms, concepts, theories and calculations (AO2). • Information presented will lack selectivity and organisation. Interpretation of economic information will be limited, with a lack of analysis of issues (AO3).
Level 2	3–4	• Demonstrates partial knowledge and understanding by developing relevant points. Partial application of economic terms, concepts, theories and calculations (AO2). • Information presented will demonstrate some selectivity and organisation. Interpretation of economic information will be good, with some analysis of issues (AO3).
Level 3	5–6	• Demonstrates clear knowledge and understanding by developing relevant points. Appropriate application of economic terms, concepts, theories and calculations (AO2). • Information presented will demonstrate excellent selectivity and organisation. Interpretation of economic information will be excellent, with a thorough analysis of issues (AO3).

Question Number	With reference to the data above and your knowledge of economics, assess how effective monetary policy is likely to be in increasing output for a country such as New Zealand. **Indicative content**
2(g)	**AO2 (3 marks)/AO3 (3 marks)/AO4 (3 marks)** **AO2 and AO3** • The central bank of New Zealand's recent reduction in the base rate to 5.25% could encourage businesses to borrow and invest, potentially boosting output in a difficult economic environment • The reduction makes loans more affordable for households, which can directly lead to increased spending and sales for firms • Lower interest rates may stimulate consumer spending, which has been weak, thereby increasing demand for goods and services and driving up production • Expansionary monetary policy can weaken the New Zealand currency, making exports more competitive and increasing output in export-driven industries • Monetary policy adjustments can be quickly implemented, providing a timely boost to economic output which is struggling with rising unemployment and low consumer confidence **AO4** • However, given the ongoing economic difficulties, including weak consumer confidence, the reduction in the base rate from 5.5% to 5.25% may not be sufficient to significantly boost spending and output • The small size of the rate cut may have only a minimal impact on boosting economic activity and increasing output • Firms in New Zealand may remain hesitant to invest despite the rate cut due to uncertainties like rising unemployment and reduced investment activity • Expansionary monetary policy can lead to inflationary pressures, which might offset gains in output by reducing purchasing power • Monetary policy may be less effective if the economy is already at or near full capacity, leading to limited increases in output

2025 NOV · Paper 02 · extract 6 of 7 · find part b in this mark scheme extract

Level	Mark	Descriptor
	0	No rewardable material.
Level 1	1–3	• Demonstrates basic knowledge and understanding by developing relevant points. Limited application of economic terms, concepts, theories and calculations (AO2). • Information presented will lack selectivity and organisation. Interpretation of economic information will be limited, with a lack of analysis of issues (AO3). • Only offers one viewpoint, meaning there is an unbalanced and incomplete evaluation, showing limited understanding and awareness (AO4).
Level 2	4–6	• Demonstrates partial knowledge and understanding by developing relevant points. Partial application of economic terms, concepts, theories and calculations (AO2). • Information presented will demonstrate some selectivity and organisation. Interpretation of economic information will be good, with some analysis of issues (AO3). • Offers more than one viewpoint but the argument may lack balance, leading to an evaluation that may not demonstrate full understanding and awareness (AO4).
Level 3	7–9	• Demonstrates clear knowledge and understanding by developing relevant points. Appropriate application of economic terms, concepts, theories and calculations (AO2). • Information presented will demonstrate excellent selectivity and organisation. Interpretation of economic information will be excellent, with a thorough analysis of issues (AO3). • Offers more than one viewpoint. The argument is well balanced and coherent, leading to an evaluation that demonstrates full understanding and awareness (AO4).
