# Practice workbook · What shifts the demand curve

The non-price factors (advertising, income, tastes, substitutes, complements, demographics) that shift demand left or right, and what a shift means.

14 question parts: 1 worked-example retry and 13 further practice parts.
Name: _____ Class: _____ Date: _____

Practise one question type at a time. Attempt the part inside the red boundary; the rest of the question and any figures are kept for context. Write your working in the answer space.

The first question is a retry of the website worked example, without its solution. Check your answers online with 'Check my answer', or ask your teacher for the answer booklet.

At the end of 2023, Amazon Prime ended its streaming service of live tennis coverage in the UK after a period of five years. Sky took over the service at the start of 2024 but at a much higher price to customers.

Subscribing to Tennis TV is the only alternative to Sky for customers in the UK wanting to stream the majority of live tennis. On 28th December 2023, Tennis TV increased the price of its subscription.

(d) With reference to the data above and your knowledge of economics, analyse how the demand curve for Tennis TV subscriptions might have been affected by Amazon Prime ending its streaming service.

Worked-example retry · Attempt part d only.

Sri Lanka Railways (SLR) has made a loss of Rs 331bn over the last 10 years.
The Sri Lankan Government provides a subsidy so that ticket prices can be reduced. This is to encourage passengers to use trains rather than further increase congestion on the roads.

A spokesperson for SLR said that it needs to upgrade existing railway tracks to make services more comfortable for passengers as well as increase the number of trains to reduce overcrowding. This will require a larger subsidy.

(e) With reference to the data above and your knowledge of economics, assess the effectiveness of subsidies in dealing with externalities, such as road congestion.

(d) State **one** factor that would affect price elasticity of supply (PES).

(1)

(e) Define the term substitute good.

(1)

**Small but successful**

Robert has been running a small business from a workshop in his own house for nine years. He has been carving door signs and gifts out of locally sourced wood. Rather than producing identical, standard items, he decided to only make products to meet the personal requirements of his customers. Each order is made specifically for them and reviews are very positive. Robert's success is due to a growing trend across the country as consumers increasingly prefer to buy locally sourced products.

(f) Calculate the price elasticity of supply for Robert's wooden door signs when the price increases by 5.2% and quantity supplied increases by 3.9%. You are advised to show your working.

2019 JUN · Paper 01

Further practice · Attempt part e only.

**Beating the congestion in Dhaka**

Nearly 17 million people live in Dhaka, the capital of Bangladesh. The majority of people live in the city centre and traffic congestion is a problem. However, there are many auto rickshaws (a small, three-wheeled vehicle, driven by a motorcycle engine) competing in the city centre to take passengers to their destinations. Fares tend to be cheaper in the city centre than they are outside the city centre and are usually agreed between passengers and drivers.

Dhaka has a large number of auto rickshaws competing for fares.

(f) Apart from price, describe **one** advantage for passengers of this competition.

(2)

(g) With reference to the information given in **'Beating the congestion in Dhaka'**, explain **one** reason why prices for journeys using an auto rickshaw might be higher outside the city centre.
