Type MS · Draw elastic and inelastic demand or supply curves

Answer 1 of 4 · Question 3 part c · 3 marks

2024 JUN · Paper 01 · extract 1 of 5 · find part c in this mark scheme extract

3(a)	**AO1 1 mark** The only correct answer is: **B** The school-leaving age A is not correct because this would increase the supply of labour C is not correct because this would mean more people were available to work D is not correct because this would affect the demand for labour	**(1)**

Question number	Which **one** of the following is the formula to calculate total revenue? **Answer**	**Mark**
3(b)	**AO1 1 mark** The only correct answer is: **A** Quantity sold x price B is not correct because this does not allow revenue to be calculated C is not correct because this does not account for units sold D is not correct because this does not calculate revenue	**(1)**

Question number	Using the diagram below, draw a price elastic demand (PED) curve. Label the curve and show the impact on both axes from a change in price. **Answer**	**Mark**
3(c)	**AO2 3 marks** Award 1 mark for drawing elastic demand curve, labelled Award 1 mark for showing smaller price change on the axis Award 1 mark for showing a greater change in the quantity on the axis  	**(3)**

Type MS · Draw elastic and inelastic demand or supply curves

Answer 1 of 4 · Question 3 part c · 3 marks

2024 JUN · Paper 01 · extract 2 of 5 · find part c in this mark scheme extract

Question number	With reference to the data above and your knowledge of economics, analyse the possible advantages for Coca-Cola of using division of labour at the factory. **Indicative content**
3(d)	**AO2 (3 marks)/AO3 (3 marks)** **AO2 and AO3** • Division of labour involves breaking down the production process into smaller tasks • Each worker specialises in only one task, such as filling bottles, sealing with caps or adding labels • By specialising, efficiency is improved because workers can carry out these tasks more quickly, allowing more than one million drinks to be bottled each day • This leads to an increase in productivity and lower average costs of production of drinks such as Fanta and Sprite • The 1,000 workers do not need to waste time moving across the 65,000m^2 site between tasks and so greater efficiencies are created, again lowering average production costs

Level	Mark	Descriptor
	0	No rewardable material.
Level 1	1–2	• Demonstrates basic knowledge and understanding by developing relevant points. Limited application of economic terms, concepts, theories and calculations (AO2). • Information presented will lack selectivity and organisation. Interpretation of economic information will be limited, with a lack of analysis of issues (AO3).
Level 2	3–4	• Demonstrates partial knowledge and understanding by developing relevant points. Partial application of economic terms, concepts, theories and calculations (AO2). • Information presented will demonstrate some selectivity and organisation. Interpretation of economic information will be good, with some analysis of issues (AO3).
Level 3	5–6	• Demonstrates clear knowledge and understanding by developing relevant points. Appropriate application of economic terms, concepts, theories and calculations (AO2). • Information presented will demonstrate excellent selectivity and organisation. Interpretation of economic information will be excellent, with a thorough analysis of issues (AO3).

Type MS · Draw elastic and inelastic demand or supply curves

Answer 1 of 4 · Question 3 part c · 3 marks

2024 JUN · Paper 01 · extract 3 of 5 · find part c in this mark scheme extract

Question number	With reference to the data above and your knowledge of economics, assess whether supply is likely to be more price elastic for textiles than for agricultural products. **Indicative content**
3(e)	**AO2 (3 marks)/AO3 (3 marks)/AO4 (3 marks)** **AO2 and AO3** • Price elasticity of supply (PES) measures the responsiveness of supply to a change in price • PES is affected by how quickly and easily supply can change when price changes • A product has an elastic PES if the percentage change in supply is greater than the percentage change in price. The greater the difference, the more price elastic the supply of the product • Supply of textiles does not depend on natural factors like the weather whereas it does for agricultural products, meaning it is easier to change supply of textiles in response to a change in price • Agricultural products, such as fruit, are perishable as well as needing time to grow but textiles can be stored, meaning the supply of agricultural products is less likely to change in response to a change in price compared to the supply of textiles • Supply of textiles is more price elastic because, unless you are operating at full capacity it is possible to work an extra shift and increase production **AO4** • However, if operating at full capacity, it takes time and a range of machinery to produce textiles, making it more difficult to change production to respond to a change in price • The cost involved when producing textiles means firms may not be able to afford to produce them to store. This may make the supply of textiles less price elastic • It may depend on the growing conditions in Bangladesh whether the farmers can adjust growing in response to a change in price • Supply of agricultural products might be more price inelastic in the short run but in the long run producers may be able to adjust techniques to respond to changes in price more quickly

Type MS · Draw elastic and inelastic demand or supply curves

Answer 1 of 4 · Question 3 part c · 3 marks

Question number	With reference to the data above and your knowledge of economics, analyse why the UK Government might provide flood defences. **Indicative content**
3(d)	**AO2 (3 marks)/AO3 (3 marks)** **AO2 and AO3** • Without the government intervention of the flood defence system, the River Calder flooding may continue, causing firms to shut down, residents to lose their homes and an increase in damaged infrastructure • The UK Government made the £32m investment in a flood defence scheme because residents, businesses and infrastructure in Calderdale had repeatedly suffered from flood damage • The UK Government is likely to provide goods and services that the private sector would be unwilling to provide because of the lack of profit • Flood defences in Calderdale are an example of market failure because the private sector is unlikely to provide resources needed to manage the problem in sufficient quantities • Flood defences are an example of public goods that are provided by the government and have characteristics of being non-rivalry and non-excludable • Failure to provide flood defences would increase the need for individuals and firms to rely on the UK Government financially

Answer 3 of 4 · Question 3 part c · 3 marks

2023 JAN · Paper 01 · extract 4 of 6 · find part c in this mark scheme extract

Question number	With reference to the data above and your knowledge of economics, assess the impact of trade union activity on Morrisons and its employees. **Indicative content**
3(e)	**AO2 (3 marks)/AO3 (3 marks)/AO4 (3 marks)** **AO2 and AO3** • A trade union is an organisation which represents the employees in an industry • It aims to protect workers' rights, increase wages, provide legal assistance, put pressure on governments to legislate in favour of employees and improve working conditions • Trade union, Usdaw negotiated an hourly wage increase for the 110,000 workers at Morrisons supermarkets of nearly 9% • An increase in the wage rate may lead to inefficiency and unemployment • This is because the wage increase at the supermarket will mean higher costs for the firm. It may therefore, try to reduce costs by employing fewer workers • Possible use of a diagram  **AO4** • However, the wage rate increase of at least £0.80 per hour may increase productivity • This means Morrisons may be able to maintain the number of workers it employs because, increased productivity would not result in higher costs due to the wage increase • As Morrisons is a leading supermarket, it may be able to pass some of the higher wage rate costs on to consumers in the form of increased prices • This may depend whether the products sold are price inelastic in demand

Question number	With reference to the data above and your knowledge of economics, analyse the possible advantages of privatisation for TAP Air. **Indicative content**
3(d)	**AO2 (3 marks)/AO3 (3 marks)** **AO2 and AO3** • Privatisation is the act of selling a firm controlled by the government to private investors • TAP Air may benefit from investment in the airline from private investors wanting to put a structure in place capable of maximising profit • This means that there may be more money available to allow the airline to become more established and increase sales of flights to passengers, possibly expanding further than the operations in Portugal • In addition, an objective of profit maximisation may enable efficiency to improve within the airline and lower costs • Greater efficiency may also be enjoyed through less bureaucracy and political interference from the Portuguese Government, especially if the new owners are more experienced in operating an airline

Answer 4 of 4 · Question 3 part c · 3 marks

2024 JUN · Paper 01 (regional R) · extract 3 of 5 · find part c in this mark scheme extract

Question Number	With reference to the data above and your knowledge of economics, assess whether an increase in the price of Prime Hydration is always likely to lead to an increase in total revenue for retailers. **Indicative content**
3(e)	**AO2 (3 marks)/AO3 (3 marks)/AO4 (3 marks)** **AO2 and AO3** • Price elasticity of demand (PED) measures the responsiveness of demand to a change in price • A product has an inelastic PED if the percentage change in demand is less than the percentage change in price. The greater the difference, the more price inelastic the demand for the product • At its launch, Prime Hydration was very popular, especially with teenagers, in part due to the association with celebrities KSI and Logan Paul • These factors are likely to lead to an inelastic PED, especially due to the lack of substitutes and relatively low proportion of income spent on the drink • When there is a price increase, for example from £1.99 to £8.25 (315% increase), a product with an inelastic PED is likely to lead to a higher total revenue • This is due to demand falling by a lower percentage than the increase in price • Therefore, retailers selling Prime Hydration at increased prices are likely to receive more in total revenue **AO4** • However, if availability is not guaranteed, products cannot be sold and revenue cannot be gained • Over time demand is likely to become more price elastic • This may be due to consumers finding alternative products, supply increasing or because the drink may go out of fashion and/or the YouTube celebrities may no longer be as popular • It may depend on how much the price increases because demand is based on a consumer's ability and willingness to buy the drink • Therefore, if the price was increased too much, some consumers would no longer be able to afford to buy the drink and some would no longer be willing, as other products would be more of a necessity • As a result, an increase in price of Prime Hydration may only lead to an increase in total revenue in the short term
