Germany's economy shrank more than expected in the fourth quarter of 2022. This raised doubts over the ability of Europe's biggest economy to avoid a recession and recover quickly from its energy crisis due to high gas and oil prices.

Record inflation rates of 10.4% caused reductions in German consumer spending and business investment in buildings and machinery. This led to a 0.4% decrease in gross domestic product (GDP) from the previous quarter.

The effects will be felt by consumers, workers, firms and the German Government.

(e) With reference to the data above and your knowledge of economics, assess how a recession may affect inflation in a country such as Germany.

The Chinese economy only grew by 3% in 2022. However, in 2023 exports increased by 14.8% compared to the previous year, suggesting that China would achieve its growth target of 5%.

By March 2023, China was experiencing an economic recovery with the services and construction sectors reaching a 12-year high.

However, China's export recovery is expected to be temporary. This is because of possible weaker global demand due to interest rate rises in many economies.
